

# The Right Stuff of Tahoe, Incorporated

Storage Solutions for Geological Drill Samples

## RightCoreWare™ empowers

- Geologists
- Prospectors
- Drill Sample Curators

Use RightCoreWare™ to automatically print tough, plastic-laminated labels: readable by people, bar-coded for computers.

1D or high density 2D bar code captures and preserves drilling data, such as hole number and depth.

Printed bar code and online database identify *what* you have.

Scan the bar code to track *where* it is.

## RightCoreWare™

Hardware and software system.  
Bar codes, tracks, and organizes drill samples.

Portable ensemble

Our professionals will outfit your team with customized, up-to-date printing and handheld scanning technology. Ensemble hardware may differ from models shown.
